Face detection updated code (Brittleness Check)

AUTHOR
Shreya Shetty

Shreya's Final R Code for DSPP Week 2 Presentation on Face Detection (Brittleness by Variable)

STEP 1: THE SHARED SETUP (Everyone runs this first)

```
library(magick)
```

```
Linking to ImageMagick 6.9.13.29
Enabled features: cairo, fontconfig, freetype, heic, lcms,
pango, raw, rsvg, webp
Disabled features: fftw, ghostscript, x11
```

```
library(image.libfacedetection)

# Set Working Directory
setwd("~/Documents/Spring 2026 Courses/DS for Public Policy/face

# Function to extract highest AI confidence
get_max_confidences <- function(folder_path, sample_size = 80) {
  image_files <- list.files(folder_path, full.names = TRUE, pat
  image_files <- image_files[!is.na(image_files)]
  if(length(image_files) == 0) return(c())

  actual_sample <- min(sample_size, length(image_files))
  sampled_files <- sample(image_files, actual_sample)
  max_confs <- numeric(actual_sample)

  for (i in 1:actual_sample) {
    img <- tryCatch(image_read(sampled_files[i]), error = funct
    if (!is.null(img)) {
